Built for Work

What leaders care about

- **Reduce risk from everyday work**
People sign in the approved way and your rules guide how data is handled.
- **Control technology spend**
Fewer installs to manage, fewer surprises, and longer device life.
- **Faster staffing and offboarding**
Get new hires and outside contractors productive fast and remove access just as fast.
- **Fewer workflow blockers**
Reduce “it doesn’t work on my computer” moments and keep people moving.
- **Clear visibility into work patterns**
See app usage and trends so you can coach teams and improve output.
- **Simple everyday use**
Open work apps like Outlook or QuickBooks in clean app windows that feel familiar.

How Island fits into your day

- **One approved way in** for all users, on any device.
- **Work stays in company places** even when people use personal machines.
- **Same experience everywhere** whether office desktop, home laptop, or shared station.
- **Yes to contractors and BYOD** without installing invasive tools on personal devices.

Works great with what you use

- Microsoft 365 including Outlook, Teams, Word, Excel, PowerPoint, OneDrive, SharePoint
- Google Workspace including Gmail, Drive, Docs, Sheets, Meet
- Industry web apps across finance, healthcare, professional services, retail, logistics, construction, legal, and more

If it runs in a browser, Island helps guide how people sign in and how data is handled while they work.

Protect data where work happens

Clear, practical rules guide access and movement of information.

- Choose who can reach which apps from which devices and locations
- Keep sensitive files in company storage and approved locations
- Allow approved AI and SaaS tools and limit unsanctioned ones
- Record key events so issues can be reviewed and addressed

A familiar experience on day one

Island is built on the same underlying technology as Chrome and Edge, so it feels familiar right away. It supports the same extensions your team knows. Your IT provider can allow the ones you want and block the rest. Apps can open in dedicated windows that look and launch like desktop software.

See work patterns and improve output

- Understand which apps drive the day and where time is spent
- Spot bottlenecks that slow teams down
- See adoption of approved tools and reduce use of risky lookalikes
- Track trends over time to guide training and process updates
- Visibility focuses on work activity, not personal device monitoring

Compliance support

Helps support programs and audits for HIPAA, GDPR, CCPA, GLBA, SEC and FINRA guidelines, CMMC, NIST 800-171, SOC 2, and ISO 27001 through consistent access control, policy enforcement, and event records.

Get started in 3 simple steps

1. Try it with a small group

Your IT provider sets up Island for a few users to run everyday apps and files.

2. Validate the workflow

Confirm sign-in, downloads to approved locations, and the day-to-day experience on office and personal devices.

3. Roll out at your pace

Expand to more users and choose where downloads land on company machines or keep them in sanctioned cloud storage.
