

# Safe BYOD with Island

Let people work from personal devices while you protect access and data without installing invasive software.

## Why leaders adopt Island for BYOD

- **Protect access without invading privacy**  
No heavy monitoring tools on personal devices. People open their work browser for work.
- **Keep company data in company places**  
Guide downloads, copy, print, and storage so files stay where they belong.
- **Onboard and offboard in minutes**  
Issue a login to start and remove access when work is done.
- **Empower outside contractors**  
Extend access safely without shipping hardware.
- **Lower cost than legacy approaches**  
Avoid complex VDI or remote desktop for common use cases.
- **A consistent experience anywhere**  
Same workflow at the office, at home, or on the road.

## How it works

Island runs on personal laptops and desktops without requiring invasive agents. Users sign in the approved way, access the apps they need, and your rules guide how data is handled while they work.

## Protect data where people work

- Allow or block downloads based on device trust level
- Keep sensitive files in approved locations such as OneDrive, Google Drive, Box, and Island Cloud Secure Storage
- Limit copy, paste, printing, and screenshots where it makes sense
- Allow approved AI and SaaS tools and limit unsanctioned ones
- Record key events so issues can be reviewed and addressed

**CONNECT WITH US!**

## Privacy-respecting by design

- Work activity is governed inside the Island Browser
  - No invasive monitoring software installed on personal machines
  - Clear separation between personal life and work activity
- 

## Great for common BYOD scenarios

- Remote staff and hybrid teams
  - Outside accountants, developers, designers, and other contractors
  - Temporary or seasonal workers and short-term projects
- 

## Works great with what you use

- Microsoft 365 and Google Workspace for email, files, and collaboration
- Web apps across finance, healthcare, professional services, retail, logistics, construction, legal, and more

## Compliance support

Helps support programs and audits for HIPAA, GDPR, CCPA, GLBA, SEC and FINRA guidelines, CMMC, NIST 800-171, SOC 2, and ISO 27001 through consistent access control, policy enforcement, and event records.

## Get started in 3 simple steps

### 1. Pilot on a few personal devices

Your IT provider enables Island for a small group of staff or contractors, no invasive installs required.

### 2. Prove the basics

Use one approved sign-in path, work in everyday apps, keep files in sanctioned cloud locations, and compare the experience and cost against VDI.

### 3. Grow with confidence

Add more users at your pace and expand BYOD access where it makes sense.
